
Water saving tips

**Only use water
for the essentials**

**Don't
waste it**

**Reuse it where
you can**

Check out the following tips to see how you could save water.

Even the smallest actions can lead to big savings.

It all makes a difference:

- Take the four-minute shower challenge – switching from a bath to a four-minute shower uses half the amount of water. In fact, one minute less in the shower can save up to seven litres of water a day.
- Turn off the tap while brushing your teeth and you could help to save 8,000 litres of water going to waste each year.
- Push the right flush and help save 10 litres of water a day – the short flush for pee and the big one for poo.
- Take a cooler shower – not only will you help to save water being wasted while waiting for it to heat up, but you'll likely spend less time in there.
- Try to reuse towels where possible. Each 10kg towel wash consumes at least 50 litres of water.
- Using a plug in a sink instead of running the tap can reduce water wastage by 50%.
