

## DWMP Stakeholder Workshops September 2020: Suggestions for Additional Planning Objectives per River Basin Catchment

These were colour coded to enable us to group into general topic areas.

River Basin Catchment										
Cuckmere and Pevensey Levels	East Hampshire	Adur & Ouse	Stour	Medway	Rother	New Forest	Arun & Western Streams	Isle of Wight	Test & Itchen	North Kent
Reduce pollution risk in the MCZ	Reduce Pollution and secure nutrient neutrality	Achieve Good Ecological Status (GES/GEP)	Improve surface water management*	Improve surface water management*	Reduce impacts of chemicals and plastics	Achieve Good Ecological Status (GES/GEP)	Achieve Good Ecological Status (GES/GEP)	Achieve Good Ecological Status (GES/GEP)	Improve surface water management*	Reduce impacts of chemicals and plastics
Reduce the impacts of coastal erosion	Improve surface water management*	Improve surface water management*	Reduce groundwater pollution	Reduce groundwater pollution	Reduce groundwater pollution	Reduce flooding from "all sources"	Improve surface water management*	Biodiversity Net gain	Reduce groundwater pollution	Reduce groundwater pollution
Secure nutrient neutrality		Reduce impacts of coastal erosion (need to move WTWs)	Reduce failure of pumping stations	Reduce CSO discharges	Improve effluent quality in dry weather	Increase natural capital	Reduce CSO impacts on receiving waters	Achieve carbon neutrality	Biodiversity Net gain	Increase surface water separation to reduce CSO discharges
		Reduce CSO discharges	Increase water recycling and reuse	Increase water recycling and reuse		Secure nutrient neutrality in the Solent	Reduce Nitrate & Phosphate Pollution	Secure nutrient neutrality in the Solent	Reduce impact of droughts on effluent	Secure nutrient neutrality in the Estuaries
Alignment with Defra 25yr plan objectives		Improve bathing waters	Reduce misconnections	Reduce flooding due to tide locking		Reduce impact of tourism arising from campsites	Improve bathing and shellfish waters	Reduce impacts from coastal erosion	Reduce flooding due to tide locking	Reduce cumulative impacts of discharges
			Secure nutrient neutrality	Secure nutrient neutrality				Improve the quality of bathing waters	Deliver holistic solutions for nutrient neutrality	Improve the quality of bathing and shellfish waters
								Find innovative solutions that address multiple issues	Achieve carbon neutrality	First time sewerage Schemes
									Reduce CSO discharges	

We used the criteria below to identify which objectives should be considered further for inclusion in the first round of the DWMPs.

<b>Data is readily available, method of risk assessment would be simple, and the planning objective can be included in cycle 1 of DWMP</b>	Data from EA	Data from EA / Defra	Dependent on data from NE	
<b>Data is not readily available or method is complex, so defer planning objective to future rounds of the DWMP</b>	Data from UKWIR	Data from LLFAs / EA	Data from SMPs	
<b>Planning objective is a generic aim, rather than an indicator of current and future performance</b>				
<b>Already included in existing planning objectives (or modified easily)</b>	Storm Overflow	1 In 50yr	Resilience assessment	
<b>Will be included within the Multi-Criteria Analysis of the Options Development and Appraisal stage</b>
